

Turn Down The Noise: Blocking Ads On Your Home Network

Matthew Gracie
Nerd Nite Buffalo
April 2, 2024

Who am I and what am I talking about?

Why would I want to block ads on my network?

- Bandwidth preservation
- Privacy
- Security

Why is a network ad blocker a good solution?

Okay, so how does it work?

How network clients are configured.

How network clients are configured.

DHCPDISCOVER

How network clients are configured.

DHCPOFFER

This includes the client IP,
gateway, DNS settings, and more.

How domain names are resolved.

How domain names are resolved.

Where is buffalo.nerdnite.com?

How domain names are resolved.

That is at 104.198.5.36.

How DNS sinkholing works.

Where is buffalo.nerdnite.com?

How DNS sinkholing works.

That is at 104.198.5.36.

How DNS sinkholing works.

Where is tracking.google.com?

How DNS sinkholing works.

Never heard of it. 0.0.0.0.

The Pi-hole Project is a preconfigured sinkhole.

- Install the Pi-hole software on a local computer or device.
- Configure your router to point clients to that DNS server.
- That's all!

Why is it called Pi-hole?

Why is it called Pi-hole?

Other uses for the Pi-hole.

- Assign DNS names to devices on your network.
- Block domains for some or all endpoints.
- Report on Internet activity.

Demonstration.

Questions?

- Slides available at github.com/InfosecGoon
